

## ABSTRACT OF THE DISCLOSURE

The purpose is to simplify the heat transfer process and extend the performance range of the corresponding installations. The purpose is achieved by arranging for opposite movements of the conveyor (4) with the cylindrical packings (5) and those of the conveyor (7, 7') with the decoration, rotating the objects (5) by means of the movement of the conveyor (7, 7') and applying the necessary heat to the conveyor (7, 7'). Such processes and devices are used in the foodstuffs and beverages industry among others to decorate cylindrical packings of different materials.
